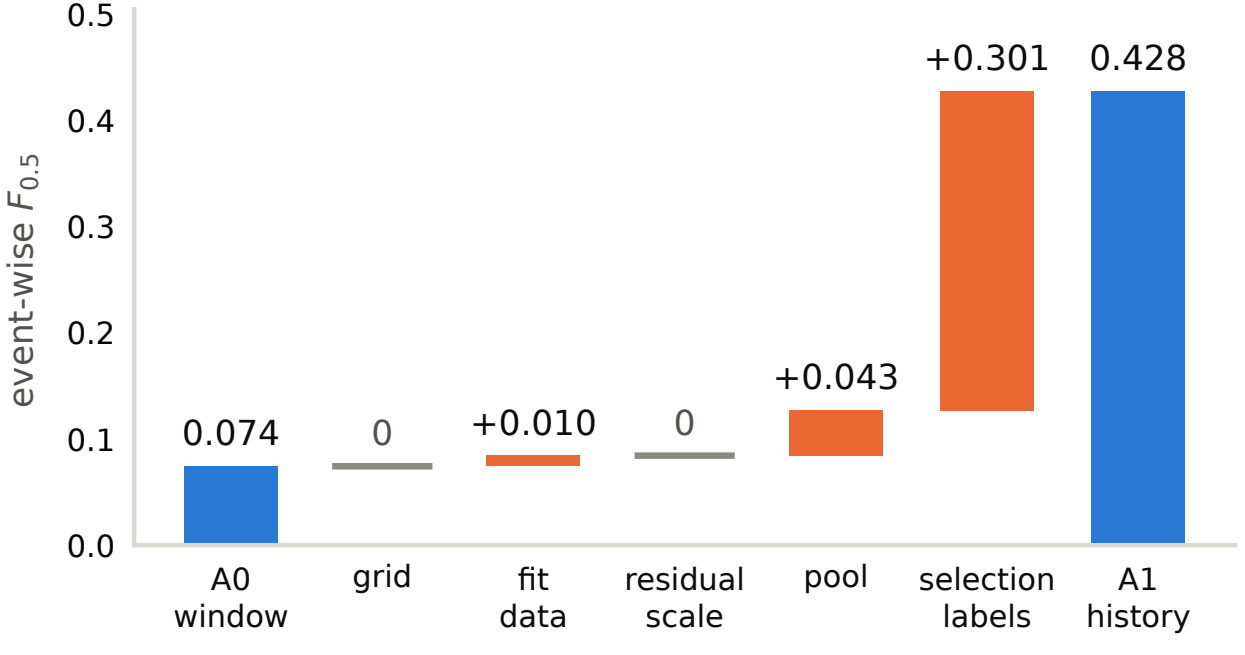
Where does an event-level gain come from?

ESA-ADB Mission 1, same AR(8) scorer: one protocol factor switched at a time, A0 to A1 (frozen plan)



Deep scorer

TCN vs AR(8): -0.222
no gain from capacity

Forward in time

history protocol wins 2 of 4 folds:
not replicated

Other settings

gain reverses on lightweight channels and on Mission 2 (BH)

Adaptive conformal

point-rate tuning fails;
event tuning 0.472
