
(a) 64,516 catalogued objects, one GCAT canonical orbit each
fragments (26,066)
payloads (25,304)
components (7,578)
rocket stages (5,568)
apogee (km, log scale)
perigee of the canonical orbit (km)
(b) objects by canonical-orbit epoch, and the two forecast origins
cohorts of each origin
train
tune-A / tune-B
test
objects per year
origin 2011
origin 2016
year of the canonical-orbit epoch
(c) observed lifetimes and censoring
decayed naturally (32,970)
censored: in orbit, or phase ended without natural decay (31,546)
5-yr cap of the target
848 objects decayed on their canonical-orbit epoch (0 days), plotted at the left edge
objects per bin
time from canonical-orbit epoch to decay or censoring
(d) space weather (CelesTrak SW-All)
test of origin 2011
test of origin 2016
daily
81-day mean (model input)
F10.7 solar flux (sfu)
year
